

ISOLA FELT ROOFING SHINGLES

- ★ Market leading quality roofing product
- ★ Life expectancy of more than 20 years
- ★ Used and recommended as roof covering in Norway, to withstand the extreme cold & wet weather
- ★ Strong adhesive areas, providing a reliable seal and storm-proof roof
- ★ A perfect addition to your Olympian Garden Building

Isola felt roofing shingles, with their glass felt core and when laid on a solid wooden roof, provide a reliable, functional roof for several decades! The combination of glass felt and thick, flexible bitumen produces a product that is both strong and flexible.

The shingles do not absorb moisture and remain unaffected by the wind and weather - year after year.

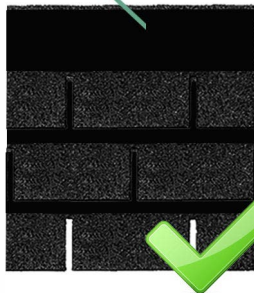

Isola felt roofing shingles are coated with fine silan sand on the backside. Unlike normal sand it provides a barrier against humidity and prevents the ingress of moisture.

We only use high quality Isola felt shingles:

Tongue & groove guarantee a simple & correct horizontal laying

Defined nail points safeguard optimal attachment & sealing

Connective adhesive area over the whole width of the shingle front & back, with unique adhesive for immediate bonding
